## TO THE ASSISTANT COMMISSIONER FOR PATENTS

Box Patent Application  
Washington, D.C. 20231

Transmitted herewith for filing under 35 U.S.C. 111(a) and 37 C.F.R. 1.53(b) is a new utility patent application for invention entitled:

**Currency And Credit Rating System For Business-To-Business Transactions**

and invented by:

**Klaus Heuring**

If a **CONTINUATION APPLICATION**, check appropriate box and supply the requisite information:

☐ Continuation ☐ Divisional ☐ Continuation-in-part (CIP) of prior application No.: \_\_\_\_\_

Which is a:

☐ Continuation ☐ Divisional ☐ Continuation-in-part (CIP) of prior application No.: \_\_\_\_\_

Which is a:

☐ Continuation ☐ Divisional ☐ Continuation-in-part (CIP) of prior application No.: \_\_\_\_\_

Enclosed are:

### Application Elements

1. ☒ Filing fee as calculated and transmitted as described below
2. ☒ Specification having 20 pages and including the following:
  - a. ☒ Descriptive Title of the Invention
  - b. ☐ Cross References to Related Applications (if applicable)
  - c. ☐ Statement Regarding Federally-sponsored Research/Development (if applicable)
  - d. ☐ Reference to Microfiche Appendix (if applicable)
  - e. ☒ Background of the Invention
  - f. ☒ Brief Summary of the Invention
  - g. ☒ Brief Description of the Drawings (if drawings filed)
  - h. ☒ Detailed Description
  - i. ☒ Claim(s) as Classified Below
  - j. ☒ Abstract of the Disclosure

# UTILITY PATENT APPLICATION TRANSMITTAL (Small Entity)

(Only for new nonprovisional applications under 37 CFR 1.53(b))

Docket No.

## Application Elements (Continued)

3. ☐ Drawing(s) (when necessary as prescribed by 35 USC 113)
- a. ☐ Formal      b. ☒ Informal      Number of Sheets 2
4. ☒ Oath or Declaration
- a. ☐ Newly executed (original or copy)      ☐ Unexecuted
- b. ☐ Copy from a prior application (37 CFR 1.63(d)) (for continuation/divisional application only)
- c. ☒ With Power of Attorney      ☐ Without Power of Attorney
- d. ☐ DELETION OF INVENTOR(S)  
Signed statement attached deleting inventor(s) named in the prior application,  
see 37 C.F.R. 1.63(d)(2) and 1.33(b).
5. ☐ Incorporation By Reference (usable if Box 4b is checked)  
The entire disclosure of the prior application, from which a copy of the oath or declaration is supplied under Box 4b, is considered as being part of the disclosure of the accompanying application and is hereby incorporated by reference therein.
6. ☐ Computer Program in Microfiche
7. ☐ Genetic Sequence Submission (if applicable, all must be included)
- a. ☐ Paper Copy
- b. ☐ Computer Readable Copy
- c. ☐ Statement Verifying Identical Paper and Computer Readable Copy

## Accompanying Application Parts

8. ☐ Assignment Papers (cover sheet & documents)
9. ☐ 37 CFR 3.73(b) Statement (when there is an assignee)
10. ☐ English Translation Document (if applicable)
11. ☐ Information Disclosure Statement/PTO-1449      ☐ Copies of IDS Citations
12. ☐ Preliminary Amendment
13. ☒ Acknowledgment postcard
14. ☒ Certificate of Mailing
- ☐ First Class      ☒ Express Mail (Specify Label No.): EK671073679US

Title: Credit rating and currency system for business-to-business transactions

As a below named inventor, I hereby state that I qualify as an independent inventor as defined in 37 CFR 1.9(c) for purposes of paying reduced fees to the Patent and Trademark Office described in:

- ☐ the specification filed herewith with title as listed above.
- ☒ the application identified above.
- ☐ the patent identified above.

I have not assigned, granted, conveyed, or licensed, and am under no obligation under contract or law to assign, grant, convey, or license, any rights in the invention to any person who would not qualify as an independent inventor under 37 CFR 1.9(a) if that person had made the invention, or to any concern which would not qualify as a small business concern under 37 CFR 1.9(d) or a nonprofit organization under 37 CFR 1.9(e).

Each person, concern, or organization to which I have assigned, granted, conveyed, or licensed or am under an obligation under contract or law to assign, grant, convey, or license any rights in the invention is listed below:

- ☒ No such person, concern, or organization exists.
- ☐ Each such person, concern, or organization is listed below.

Separate statements are required from each named person, concern, or organization having rights to the invention stating their status as small entities (37 CFR 1.27).

I acknowledge the duty to file, in this application or patent, notification of any change in status resulting in loss of entitlement to small entity status prior to paying, or at the time of paying, the earliest of the issue fee or any maintenance fee due after the date on which status as a small entity is no longer appropriate. ## Currency And Credit Rating System For Business-To-Business Transactions

### Field Of The Invention

5

Information processing system organization.

### Background Of The Invention

10

The barter industry is divided into trade exchanges whereby discrete associations of business operators and professionals are brought together in communication networks in order to trade with new partners, ones that they might not have found without such networks.

15

Business-to-business trading and the barter industry allow for people and businesses to trade and thereby increase their total numbers of transactions while preserving vital cash flow. Barter communities offer members the possibility of trading with one another and afford their members access to new markets, markets that the barterers may not have thought to seek out. New markets and new customers are brought to the traders and the traders are able to offer their excess inventories and/or untapped capacities to perform services for trade. The benefit of barter is that transactions are made with little cash flow, if any, and excess inventory and capacity to perform services are offered in exchange for something that is needed by the business owner or professional with very little cost to the trading members.

20

25

30

Each trade exchange has its own policies determining how a member business or professional may trade with other members. Each trade exchange has a system of accounting for each member's monetary units due or owed, and perhaps a system of converting those units to currency. With each transaction, trade units are transferred from the buyer's account to the seller's account. This is not very different from the workings of a bank. The barter companies facilitate trading members trading in products or services only, but they also allow traders to transact their business partly in cash, if the traders agree upon the cash portion beforehand. As an example, a hotelier may want to trade for three computers at \$1000 each. That hotelier offers in exchange 15 nights accommodation that are normally worth \$200 per night. If the computer trader decides

that this deal can only be accomplished if the hotelier pays 60% cash and 40% trade, and the hotelier agrees, then the deal will go as follows:

1. the computer dealer will trade the computers to the hotelier,
2. the hotelier will pay \$1800 to the computer dealer,
- 5 3. the barter company will keep an accounting of ONLY the barter part of the transaction as follows
  - a. the barter company will deduct 6 nights (\$1200 worth of services) from the account of the hotelier, and
  - b. credit \$1200 worth of product/services to the account of the computer
- 10 dealer, and
4. the barter company will assess any applicable fees.

The \$1800 cash paid for the computers is never accounted for by the barter company, only the part of the transaction that equals the room nights is accounted for by the barter accounting system. There is a need in the barter industry for a currency that is made up of part cash and part product or service. This hybrid currency will allow barterers and business-to-business traders to transact business more easily and without unnecessary negotiation regarding cash. The point of bartering is to facilitate transactions. Extra business is possible due to the existence of the trade exchanges, which offer an alternative means for their members to communicate. There are currently no barter companies that allow their members to trade in a flexible currency, which is made up of a percentage of cash and trade, determined by the individual members.

#### DESCRIPTION OF RELATED ART INCLUDING INFORMATION DISCLOSED UNDER 37 C.F.R. 1.98

Other methods of devising a hybrid cash/trade currency system have been disclosed. For example, US Patent No. 5,592,376, (Currency and barter exchange debit card and system, to Hodroff), describes a currency system for bartering services using a combination of cash and "Community Economic Development Scrip", a new currency based on non-cash service credits. However, the Hodroff invention is not concerned with business-to-business trading, nor does it concern for-profit traders trading with one another. This patent necessarily involves at least one non-profit institution, at least one for-profit company, and a third party who does community service work for the

non-profit, in exchange for credits that may be used at the for-profit institution. There is a need for a hybrid system of currency to be used in business-to-business transactions.

US Patent No. 5,687,323 (Dual currency debit card patent to Hodroff), describes a system for keeping track of the transactions and debts of users of the Currency Exchange system described in the previous patent to Hodroff, (US Patent No. 5,592,376), but again does not address a system of keeping track of business-to-business transactions, and more important, it does not address the need in the art for a credit rating system for its members.

In the barter and business-to-business trade communities, credit is extended to the participating member in much the same manner as credit is extended to those who seek bank loans and other forms of conventional credit. (See <http://www.itex.com/about/barter.asp>, <http://www.itex.com/about>, [http://www.barteritonline.com/rules\\_of\\_use.htm](http://www.barteritonline.com/rules_of_use.htm), and <http://www.bigvine.com/help/newmember/mathService.jsp>, as of June, 23, 2000. Liquid assets and the resultant ability to repay a debt are important considerations in determining whether or not credit will be extended to an applicant. While the simple ability to repay a debt is important in extending credit in the barter industry, the product or service offered is just as important. There are some traders in the barter industry who are certainly most able to repay a simple debt, but who offer a product or service in trade for which there is simply very little demand. The wheels of the barter industry turn on trade, not simply on transactions involving cash currency, and the extension of credit within the barter industry should reflect the importance of different products and services offered. There is a need in the industry for a credit rating system which takes into consideration exactly what a trader is willing to offer.

### Summary Of The Invention

This invention allows members to trade with all other members without ever having to negotiate cash portions of individual trades. This invention allows members of barter communities and business-to-business traders to become better able to market their

products and services by offering them for trade in a new environment, one where there is no need to negotiate separate cash transactions.

This invention allows users to increase sales by offering extra product or services during slower periods and allows those traders to determine how much cash they need in order to stay comfortably in business. E.g., a hotelier may decide that he needs to cover his overhead and expenses in cash, but he can take the remainder of his usual fee in trade, an amount he may use for trades at a later date, when he is free to use those credits. In the usual manner of conducting a barter transaction, or a business-to-business trade, if one trader determines that he needs a portion of the trade in cash, then he needs to negotiate that with each individual with whom he transacts trades. One of the objects of this invention, Global-Cash, is a flexible trade currency. Flexible trade currency means the percent of cash and trade that he will both accept and offer in exchanging products and/or services. That percentage can be the difference between wholesale and retail prices of the product or service. Usually, when cash and trade are involved in a barter transaction, the relative percentages are determined by the seller. In this invention, Global-Cash flexible currency is used for transactions, but the percent cash offered and accepted may be different. An attorney may determine that a 10:90 cash to trade ratio is best for him and a car dealer may use a 80:20 ratio. When that attorney barter for a \$20,000 car in this situation, he will offer \$2000 cash and \$18,000 in services, and the barter manager will give the car dealer \$16,000 cash and credit him with \$4000 worth of product and/or services.

This flexible currency system, Global-Cash, is an element of a second object of this invention, a new system of extending credit to members of business-to-business trading and barter communities. Currently, trade exchanges extend credit to members based on their ability to repay a debt. There are no trade exchanges in the barter industry who extend credit to members of their networks based on the category of the products and/or services offered and the sales price of the products and/or services in relation to the member's self-selected ratio of Global-Cash flexible currency and hard currency that that member is willing to accept in trade for his products and services.

## Brief Description Of The Drawings

Figure 1 is a simple flow chart showing the steps a merchant applicant and a barter community manager go through when an applicant applies for membership, and the manager scores the applicant. Figure 1 shows the necessary steps in this invention.  
 5 Figure 2 is a flow chart showing a more elaborate application and scoring process for an applicant and barter community manager.

## Detailed Description Of The Invention

### 10 I. Hybrid currency

Global-Cash flexible currency is an invention that allows barterers and business-to-business traders to determine how much cash they need to accept in a barter-type transaction in order stay comfortably in business. It is a hybrid currency system for individual trading members of business-to-business trading communities where each  
 15 individual member selects a percentage of cash and barter that he is willing to accept in trade for his product or service, and which he is willing to offer in trade. The percentage is variable and is determined by each individual member. This solves the problem that barterers often face when negotiating transactions in barter systems where partial cash trading is allowed, but not the norm, or where partial cash transactions are simply not  
 20 allowed, or where a trader does not care to have to negotiate extra details of each and every trade he makes.

In this system, a merchant chooses the mix of cash and product and/or services (his individualized Global-Cash flexible currency) that is he is willing to both accept and offer in trade.

### 25 EXAMPLE 1

Dealing in a 50:50 cash to trade ratio, when, e.g. a jewelry store operates with a cost of goods of 50% of the retail sales price, this merchant chooses a program of 50% Global-Cash (or more or less) and 50% standard currency. On this basis, when the merchant makes a sale in this system for \$1000, his Global-Cash flexible currency  
 30 account would reflect a balance of \$500 cash, which he can withdraw at any time. He then withdraws the \$500 cash. Now this merchant wishes to purchase a product from

another member of this community, e.g. a \$200 television. He uses \$100 from his Global-Cash trade account (leaving \$400 from the jewelry transaction) and he has to deposit \$100 cash into his account with the barter company to finalize the transaction, because he had already withdrawn the \$500 cash. (This merchant is dealing in a 50:50 ratio, cash to trade.) Furthermore, if the television dealer has selected an 80:20 cash to trade ratio, he will be paid \$160 cash by the barter manager even though the jeweler has paid the barter manager only \$100 cash for this transaction.

Each merchant has the ability to manage his account, i.e. to deposit and withdraw available cash at will. If a merchant tries to make a purchase, and does not have enough cash in his account, then he will be notified by the barter manager.

There is no requirement that a merchant chooses a percentage that is a multiple of ten, and no requirement that he choose a percentage that will allow him to cover the cost of his inventory/ overhead expenses. The foregoing is simply an example to illustrate how this hybrid cash/trade currency system works.

The barter company keeps an accounting of the entire transaction. In the jewelry example above, the merchant is able to withdraw half of his sales price in cash, but he must use the remaining portion of his sales price in trade. There is no requirement regarding how he trades with his Global-Cash flexible currency, or with whom he trades. All such transactions are recorded by the barter group manager and the credits and debits of each individual trading member are kept for reference.

In this system, there must be least 2 people to trade with one another, and those making trades do not have to trade in person, they can be connected across the internet or other electronic means, including telephone or fax, or simply via the barter network.

All of the necessary accounting involved in this currency system can be done by hand or by a computer program.

## II. GLOBAL-CASH FLEXIBLE CURRENCY CREDIT SCORING SYSTEM

There are many factors that may be considered in granting a line of credit to an applicant. In this invention, two factors are necessary, and the others listed below are ancillary. For this invention to work, the category of the product or service offered for trade must be evaluated and assigned a score, and the percent of trade that the applicant is willing to take in exchange for his product or service that is cash must be given a score.

The sales price of the product is important but not essential to this invention, especially if there are other products on the market that are similar or identical to the one offered by the applicant.

The overall score a trader is given in evaluating his credit-worthiness is

5 determined by mathematically manipulating the scores given for the type of product offered, (the product value score), and the score given for the percent cash that that trader is willing to accept, (the cash value score) as well as the scores for other possible factors, (including but not limited to a score for the total number of a trader's listings, the total cash values of those listings, the average ticket price of those listings, the percent above

10 the lowest advertised price on the internet of those products which are identical to products offered by other vendors, the length of time the trader has been in business at the time of application, and the estimated monthly sales of the trader. The mathematical manipulations used to determine the barter score value may be simple addition, multiplication or raising values of one factor to the power of another value. For instance,

15 if the product value score is 50 and the cash value score is 35, the barter credit score would be 85 if these are the only scores taken into consideration and they are simply added. If, however, the barter manager feels that a better indication of credit-worthiness at a given time would be determined more heavily by the product value score, he can double the product value score and add that to the cash value score.  $(50 \times 2 + 35 = 135)$ .

20 A person using this credit scoring system can take as few as two variables into consideration, (category of product and percent Global-Cash flexible currency), or that person can take many other variables into consideration when extending a line of credit. The example below takes seven variables into consideration. Tables 1 through 7 show numerical values assigned to the variables found to be important in extending credit to

25 members of trade exchanges. Five points is a relatively low score and one hundred a relatively high score counting toward the total points an applicant can be assigned for a category in calculating that applicant's credit-worthiness. The exact point values given are not as important as the relative values.

30 The heart of the credit scoring system is the interaction between the cash value score and the product value score (i.e. the product or service offered). By offering some cash in every transaction, or a relatively high amount, (e.g. 50% cash) then the barter

company can extend a higher line of credit because the cash is immediately liquid, while one night in a hotel room is not. So according to table 2, 50% cash translates to 50 points in the total calculation of creditworthiness, again, a relatively high number of points. The category of the product or service offered is equally vital to the operation of this

- 5 invention. No barter company has ever offered credit based on the type of product a member/ credit applicant had to offer, and one's product or service is arguably the most important thing a member has to offer a barter community.

All scores for applicants are to be kept in a registry for comparison and general record keeping. It is neither necessary to make the scores available to the applicants or  
10 the general public, nor is it necessary to keep the scores secret.

-----Table 1-----

Table 1 shows the point values assigned for different types of businesses, higher numbers correlate with more desirable products and services in the barter industry.

Desirability can be a function of both scarcity and of the product or service or unwillingness of the usual business owner or professional to offer that type of product or service for trade in a barter community, and how much members of a barter community desire to have this product or service offered them.

<hr/> Table 9 <hr/>		

Table 2 shows the point assignments for percent cash offered in trade. Table 3  
 45 shows the point totals assigned for the number of listings a trader offers to the barter

community, higher number of listings translate to a greater chance that some member of the community will be interested in something that the applicant has to offer. Table 4 shows the scores for the total value of the listings. An application is given more points for bringing more value in trade to the exchange. Table 5 shows the score given for the average ticket price of each of an applicant's listings. Table 6 shows the values given to the dollar amounts equal to the estimated total monthly sales of the product or service sold through the trade exchange. Table 7 shows the points given for the price of the listing above the lowest advertised price on the Internet for which the same item is offered. It is in the best interest of the barter community when members offer products at competitive prices. Granted, it is expected that the products offered are to be exchanged for the excess inventory of other members, but the more competitive the offering prices, the greater number of transactions a member is likely to perform. Table 8 shows the scores assigned for the number of years an applicant has already been in business. The longer a company or professional has been in business, the more likely it is that this applicant will be a valuable member of the trade community. Table 9 shows sample credit lines offered based on the total score for these hypothetical applicants.

Credit Rating Examples for Different Business Types

Type of Business	Category X3	% Global-Cash X2	Number of Listings	Total Value Of Listings	Average Ticket Price	Estimated Monthly Sales	Sales Price* X2	How Long in Business	Total Score

\*Sales Price is calculated from the percent above the lowest published price on the internet for the same product

-----Table 10-----

In Table 10, all of the point values are tabulated for a number of different hypothetical applicants. Some of the point values for the columns are multiplied by a factor of two or three before being tabulated. In this example, the product value score is multiplied by a factor of three, the cash value score is multiplied by a factor of two and the average sales price above the lowest advertised price on the internet is multiplied by a factor of two. This manipulation of the scores allows for a customization of the scoring in many different ways based on the current needs of the barter company. If there is little

diversity in the types of services offered, the points given for the category of service, i.e. the product value score, can be raised/ multiplied by a factor greater than one. If more cash is needed in the system, then points given for cash value score can be raised. If the price structure is not competitive, then the score for the sales price can be multiplied by a greater factor. In other words, all of these values can be manipulated based on the economical needs of the system. The scoring system allows the people running the barter community, those offering credit to members, to be aggressive or conservative in each of the main credit scoring values, (product values score, cash value score and, and sales price score), as these factors have the most impact on global shopping.

#### 10 Example of Operation

A computer hardware dealer desires to enter into a barter group and apply for credit. The products he offers are new desktop and laptop personal computers. Based on the categories shown in table 1, his category is worth 75 points and therefore his product value score is 75 points. This dealer is willing to enter the barter group at a 25:75 cash to barter ratio, and according to table 2, the cash value score is 25 points on the barter credit scoring scale. He has 100 computers to offer in trade, and on table 3 that translates to 40 points (for his “number of products” score). The total value of his listings is \$50,000 and that translated to (a “number of products or services offered” score of) 20 points on the credit scoring scale. The average price of each computer is \$500 and that translates to (an “average sales price score” of) 25 points. His estimated monthly sales is \$7000 a month and that is worth 20 (“gross monthly sales” score) points, the “percent over the lowest advertised same item on the Internet” is 10% score is worth 30 points, he has been in business for 2 years and that gives him (a “number of years in business” score of) 10 points. The total number of points is 245,  $(75 + 25 + 40 + 20 + 25 + 20 + 30 + 10 = 245)$ . However, due to the needs of the system, the scorer, (the barter manager), deems that at this point in time, the product value scores should be worth 3 times their normal value, the cash value scores should be worth 2 times their normal point values, and the sales price as a percent over the lowest advertised internet price should be worth double its normal score as well. Therefore, his score is 450,  $(75 \times 3 + 25 \times 2 + 40 + 20 + 25 + 20 + 30 \times 2 + 10 = 450)$  and according to table 9, that translates to a credit line of \$5000.

The invention may be embodied in other specific forms without departing from the spirit or essential characteristics thereof. The present embodiments are therefore to be considered in all respects as illustrative and not restrictive, the scope of the invention being indicated by the appended claims rather than by the foregoing description, and all  
5 changes which come within the meaning and range of equivalency of the claims are therefore intended to be embraced therein.

1     **Claims**

2     What is claimed is:

- 3           1. A hybrid currency system for individual trading members of business-to-  
4     business trading communities comprising:  
5           a variable percentage of cash,  
6           in addition, the remainder of said currency made up of product or service  
7           offered for trade, said percentage is determined by the individual trading  
8           members.  
9  
10          2. A method of scoring a credit applicant in a business-to-business trading  
11     community wherein the traders offer products and or services in trade,  
12     comprising:  
13           i) establishing a product value score for said products and or services, based  
14           on desirability of said products and/or services offered for barter, wherein said  
15           products or services are of differing value; and  
16           ii) establishing a cash value score based on the percent of the barter offered by  
17           said applicant, which is cash,  
18           iii) inputting said product value score and said cash score value into a registry  
19           and  
20           iv) mathematically manipulating said scores to produce a barter credit score.  
21  
22          3. The method of claim 2 further comprising the following steps:  
23           i) establishing a score based on any or all of the following variables,  
24               a) the number-of-products-or-services offered for barter by said applicant,  
25               b) the average-sales-price of said products or services offered for barter by  
26               said applicant,  
27               c) the estimated gross-monthly-sales, based on the estimated average gross  
28               monthly sales of said products or services offered for barter by said  
29               applicant,  
30               d) the number of years in business, based on the number of years said  
31               applicant has been in business,

- e) the total value of products or services offered for barter by the applicant,
- f) the sales price of said products or services as a percent above the lowest published price on the Internet for the same product or service,
- ii) inputting said scores into a registry, and
- iii) mathematically manipulating each of said scores to produce a barter credit score.

4. A method of comparing the value of products and/or services offered for barter or business-to-business trade by at least two businesses or barterers in a trading community comprising the following step;  
assigning comparative values to said products and/or services based on the relative value of said products and/or services in the trading community.

5. A method of exchanging goods and/or services among a group of barter members comprising:

- i) establishing a barter score value for a first lot of goods and/or services to be exchanged by a first barter member, wherein said barter score value is a combination of a product or service value and a cash value for said product and or service;
- ii) inputting said barter score value into a registry, wherein said registry contains barter score values for said group;
- iii) selecting a second lot of goods and/or services for trade from said registry
- iv) comparing said barter score values;
- v) accepting said barter score values;
- vi) finalizing said exchange of goods and or services and cash.

6. The method of claim 5 wherein the step of accepting said barter score value further includes the step of supplementing said barter score value with additional cash value.

7. The method of claim 5 wherein the barter score value further includes a value of barter credit, wherein said barter credit is owed at least one of said barter members.

**Abstract Of The Invention**

This invention is a system to increase the profitability of businesses by facilitating transactions between members of trade exchanges. Global-Cash flexible currency is a currency made up of part cash and part products or services in a ratio pre-selected by individual merchants. Global-cash flexible currency allows bartering merchants to recoup the costs of their goods in cash while keeping their asking prices down. Business trade is further facilitated by the extension of credit to traders and barterers under the Global-Cash credit scoring system. The Global-Cash credit scoring system takes into consideration the product or service offered in trade, the percent offered in trade, which is cash and the remaining percent, which is the value of the listings, and a possible host of other variables. A credit rating score is calculated and a novel way of calculating credit-worthiness is hereby disclosed..

## Declaration and Power of Attorney For Patent Application

### English Language Declaration

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name,

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled

the specification of which

(check one)

☒ is attached hereto

☐ was filed on \_\_\_\_\_ as United States Application No. or PCT International  
Application Number \_\_\_\_\_  
and was amended on \_\_\_\_\_

(if applicable)

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose to the United States Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, Section 1.56.

I hereby claim foreign priority benefits under Title 35, United States Code, Section 119(a)-(d) or Section 365(b) of any foreign application(s) for patent or inventor's certificate, or Section 365(a) of any PCT International application which designated at least one country other than the United States, listed below and have also identified below, by checking the box, any foreign application for patent or inventor's certificate or PCT International application having a filing date before that of the application on which priority is claimed.
